

Coding Challenge - Senior Backend Software Engineer

David Lopera

Methodology

Methodology

Inception

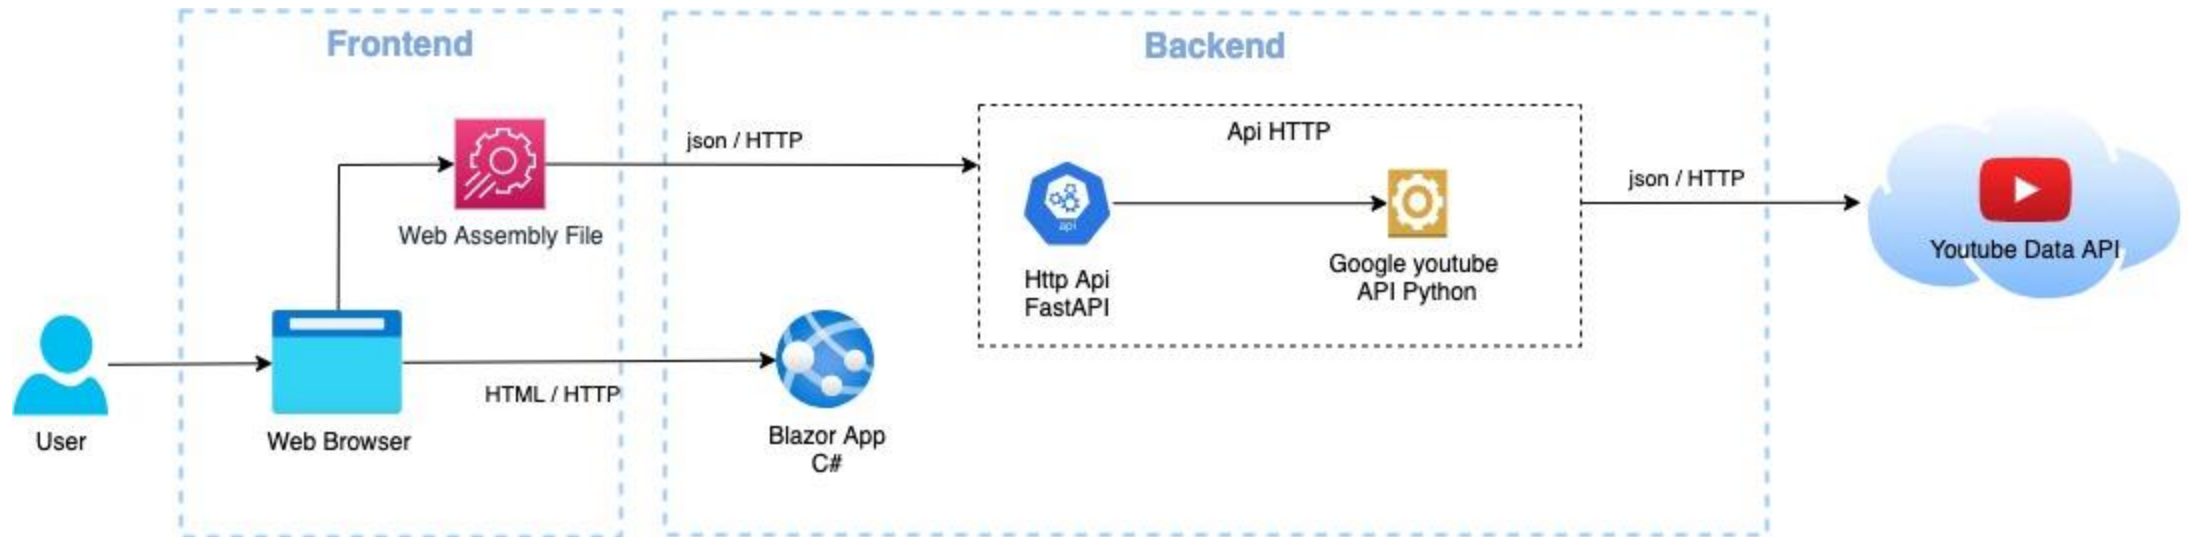

Inception

- Build GitHub project (<https://github.com/dloperab/makrwatch>) and Board to manage the development of the challenge (<https://github.com/dloperab/makrwatch/projects/2>).
- Read and understand requirements.
- PoCs to consume YouTube API --> Link to Colab (https://colab.research.google.com/drive/1PQP-_lj_0swR1DVJGb9MgeYQQrZ7bAvc?usp=sharing).
- Study Hexagonal architecture.
- Setup development environment.
- Design general architecture diagrams.

Code Walkthrough

Good development
practices
implemented

Good development practices

- Implement a clean architecture to have a division of responsibilities.
- **YAGNI: "You Aint Gonna Need It"**. Don't write code that I think might need in future.
- Agile phases for Design, Test and Implement requirements.
- Unit testing (Backend).
- Write code in a defensive way.
- Dependency Injection.
- Code organization and simplicity.
- Consistent style guide for every language used (Python, C#/.NET).
- Define small milestones.
- Keep the code simple.
- Document the important classes or methods.

Thanks!
